

HealthRepApp for Healthcare Sales

Project Features & Functionality Description

[View Project on GitHub](#)

Project Overview

This project leverages the **HealthRepApp** Salesforce Agent and **Health Cloud** to revolutionize how medical sales representatives interact with CRM data [cite: 5]. By shifting from manual data entry to an "AI-First" conversational interface, the solution minimizes administrative friction for reps managing accounts like **Uma Dental** and **Ria Healthcare** [cite: 5].

Implemented Features & Functionality

FEATURE 1

Voice-to-Record Logging & Summarization

Sales executives can dictate visit notes directly into the Salesforce mobile app [cite: 5]. The **HealthRepApp** agent captures the audio, filters conversational filler, and automatically generates structured meeting notes [cite: 5].

FEATURE 2

Automated Task Creation & Calendar Visibility

Based on dictated summaries, the agent identifies follow-up actions (e.g., "Schedule lunch with Dr. Mehta") [cite: 5].

- **Functionality:** Automatically creates Salesforce Tasks [cite: 5].
- **Outcome:** All created tasks are **immediately visible in the Sales Rep's Calendar**, ensuring seamless schedule management without manual entry [cite: 5].

FEATURE 3

Account & Healthcare Provider Management

Full lifecycle management of records through simple conversational prompts with **HealthRepApp**:

- **Create Records:** Reps can create new Account or Healthcare Provider records. The agent strictly enforces data integrity by requiring **Name and Email ID** before saving [cite: 5].
- **Update Records:** Existing records can be updated instantly (e.g., changing a contact's address or applying a discount to an account) [cite: 5].
- **Search:** Reps can query the agent to find specific existing accounts or providers in real-time [cite: 5].

Future Roadmap

Expense Management

Streamlining administrative overhead by allowing reps to log travel or meeting expenses through simple conversational prompts like "Log a \$50 dinner expense for Uma Dental" [cite: 5].

Digital Engagement (WhatsApp)

Exploring an integration where sales reps can text their visit summaries or photos of expense receipts to a WhatsApp agent to update Salesforce instantly via AI and OCR [cite: 5].
